Hi Joyce,

We are still reviewing the Phase 2 report, but we've completed our review of the geophysics portion of the report. I'm concerned with a number of aspects with the geophysics portion of the report, including but not limited to: (1) the EM61 survey did not cover the entire waste footprint, and (2) a number of the anomalies recorded by the survey were ruled out without explanation and without being investigated by test pitting. Some of the anomalies that were not investigated are in areas with GW contamination. During the site visit last week, I mentioned these issues to Dave Stewart. He said that he would arrange a call with his subcontractor. That call has not happened yet. I believe that additional geophysics is needed and additional test pit investigation is needed. I'm not sure how cooperative Stratus will be. If they are, I suppose it's possible that the additional investigatory work could be completed concurrent with the drum removal activities, but that wouldn't be an ideal situation. I'll try to reach Dave Stewart this morning.

Thanks,
Curt

Hi Curt and Dave – I received a call today from Tom at GeoSyntec regarding how the drums could be stored pending pickup for disposal. See my notes below – I told them their proposal was fine with me.

Also, I proposed to my attorney that we set a deadline of no later than November 15th for Stratus to submit of a Workplan and sign the AOC. My goal would be to send them back comments on the Workplan prior to the Thanksgiving holiday and have them begin work as soon as possible after Thanksgiving. If their first draft is pretty complete, I propose that we send that draft to the Town of Erie to expedite receiving any comments they might have.

Let me know your thoughts. Thanks!

Joyce

Subject: RE: draft AOC

Hi Andy – the cleanup contractor for Stratus called me today and proposed that they would erect a chain-link fence with a locking gate around the localized excavation area(s) and would store the drums inside that pending pickup for disposal. They proposed that they would expedite laboratory turnaround times for drum samples and strive to transport drums off-site for disposal within one week of removing them from the subsurface.

I said I would approve this proposal, so we can change paragraph 27 b. accordingly (see my original comment highlighted below.)

Thanks!

Joyce
